About This Document

What is a wireframe?

Wireframes are a page blueprint prior to the visual design used to illustrate the flow of information, document all objects to be included on the page and show the behavior and states of some of these objects. They are not meant to reflect actual design or content.

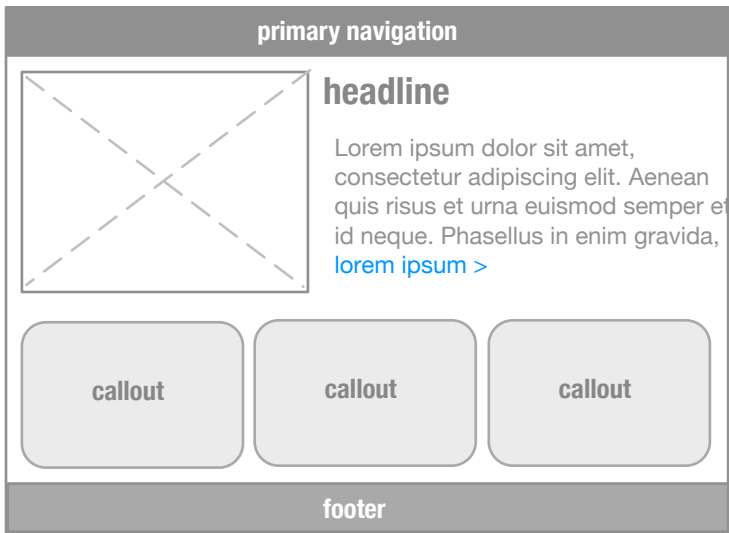

Design aspects for consideration

- Representation of selected content and functionality that will reside on a page to bring the strategic concept to life.
- An allocation of page real estate to illustrate priority and placement.
- Intent of copy - indicative of the eventual design. This includes titles, labels, links, prompts and instructions.
- Schematic that identifies key page areas (modules).
- Direction for visual design explorations.

Aspects not for wireframe review

- Final copy or branding treatments
- The design/look&feel of the page
- Representation of the specific photography to be used
- The final layout of future content and functionality
