Vision Delivered d

User Flows

Registration User Flow

- 1. Upon first seeing the registration form, registration form is editable with a sign up button
- A check box is available to save user registration information
- 2. If the user ticks the checkbox to save their registration information, they see their username as their email and 2 fields:
- password
- re-enter password

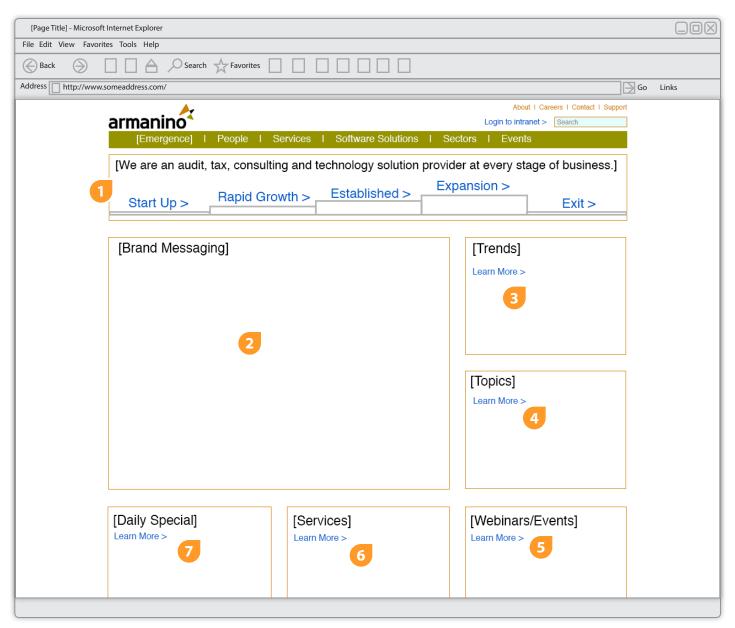

- 3. The registration information is saved within a cookie
- If a different user choices to sign up, a link is available that will take the user back to the initial sign up form
- -If the cookie has been cashed, the user does not have to register again and can bypass that step
